

Package ‘pasillaBamSubset’

October 4, 2014

Title Subset of BAM files from “Pasilla” experiment

Description Subset of BAM files untreated1.bam (single-end reads) and untreated3.bam (paired-end reads) from “Pasilla” experiment (Pasilla knock-down by Brooks et al., Genome Research 2011). See the vignette in the pasilla data package for how BAM files untreated1.bam and untreated3.bam were obtained from the RNA-Seq read sequence data that is provided by NCBI Gene Expression Omnibus under accession numbers GSM461176 to GSM461181. Also contains the DNA sequence for fly chromosome 4 to which the reads can be mapped.

pasillaBamSubset-package

Utilities returning the paths to BAM files untreated1_chr4.bam and untreated3_chr4.bam

Description

BAM file `untreated1_chr4.bam` contains the subset of `untreated1.bam` (single-end reads, "Pasilla" experiment) where only alignments located on `chr4` (Fly) were kept.

BAM file `untreated3_chr4.bam` contains the subset of `untreated3.bam` (paired-end reads, "Pasilla" experiment) where only alignments located on `chr4` (Fly) were kept.

FASTA file `dm3_chr4.fa` contains the full sequence of the *D. melanogaster* chromosome 4.

`untreated1_chr4`, `untreated3_chr4` and `chr4` return the path to those files.

Usage

```
untreated1_chr4()  
untreated3_chr4()  
dm3_chr4()
```

Details

See the *pasilla* data package for details about the "Pasilla" experiment (RNA-seq, Fly).

BAM files `untreated1.bam` and `untreated3.bam` contain single-end and paired-end reads aligned to reference genome *BDGP Release 5* (aka the *dm3* genome on the UCSC Genome Browser).

Fasta file `dm3_chr4.fa` from UCSC, the Apr. 2006 assembly of the *D. melanogaster* genome (`dm3`, *BDGP Release 5*): DNA sequence for fly chromosome 4.

Examples

```
untreated1_chr4()  
untreated3_chr4()  
dm3_chr4()
```
